It gives us great pleasure to present to you this list, which we believe covers the world's finest roses. We grow all these varieties in our own nursery, any inferior variety is discarded. Our stock is finest selected Washington Grade #1, freshly dug, 2 and 3 year old stock. Terms: Cash with order. Shipped Parcel Post prepaid excepting where specified.

CULTURAL DIRECTIONS: Plant Roses in well enriched soil. Cow manure with a generous admixture of raw bonemeal is the best planting medium for roses. Plant them so the graft line is covered with at least 1" of soil. As some roses grow faster than others it is best to space the slower growing varieties 2½ ft. apart with the faster growing varieties such as "Peace" and President Hoover, 3 ft. apart. They should be pruned back in March as soon as new bud formation shows, to the 2nd outside eye. Commence spraying in early April with a fungicide that will control powdery mildew and blackspot and an insecticide on a Lindane base. Continue spraying every 10 days throughout the season and you will have fine plants. The owner of just a few roseplants should obtain an all purpose rose dust and continue dusting every 10 days. Never water in the evening, do your watering in sufficient time to permit the foliage to dry before evening sets in.

VARIETIES

The TEN BEST ROSES as selected by the All-America Rose selection committee, based on Nation wide basis:
